Professional Summary

Engineering professional with demonstrated capability in build quality, system transformation, CI/CD automation, and observability. Delivered +40% code generation efficiency improvements, +25% throughput gains through concurrency optimization, and -30% manual effort reduction via automation. Hands-on experience across the full engineering lifecycle: build pipelines, quality automation, transformation workflows, requirements traceability, and monitoring infrastructure. Background spans AI evaluation, LLM engineering, and manufacturing systems with focus on RLHF workflows, statistical analysis, and cross-functional collaboration.

Core Skills & Technologies

Languages: Python, Swift (code-level), C++, SQL, JavaScript

AI/ML: LangChain, LLM APIs (Gemini, OpenAI), RLHF, Code Generation, Model Evaluation

Automation & Quality: CI/CD, GitHub Actions, Pytest, Ruff, Bandit, pip-audit, Statistical Analysis

Engineering: Build Pipelines, Quality Engineering, System Transformation, Concurrency Management, Performance Optimization

Observability: Monitoring Infrastructure, Dashboards, Requirements Traceability, Logging, Instrumentation

Tools: Git, FastAPI, Asyncio, REST APIs, State Machines, React, Node.js

Professional Experience

Business Analyst - AI Evaluation

Turing | Jan. 2026 - Apr. 2026 | Remote

- Conducted RLHF evaluations for code generation and translation tasks, improving model alignment through systematic feedback loops and comparative analysis
- Analyzed algorithmic performance across multiple LLM architectures, identifying optimization opportunities through statistical validation and quality metrics
- Collaborated cross-functionally with engineering and product teams to refine evaluation criteria and validation frameworks for AI-assisted development workflows
- Contributed to expanding evaluation datasets by 55% through structured data collection and quality assurance processes

LLM Engineer

Turing Enterprises Inc. | Sep. 2024 - Mar. 2025 | Remote

Project: Code Generation & Translation - Reviewed, validated, and translated Swift code responses as part of large-scale code generation workflows - Generated Python sample data and evaluated multilingual code outputs, expanding training datasets by 55% - Optimized code generation pipelines achieving +40% efficiency improvement through algorithmic refinements

Project: RLHF Algorithm Development & Optimization - Developed and optimized reinforcement learning workflows using Python and C++ - Refactored codebases to remove performance bottlenecks, improving throughput by 25% - Authored structured datasets that improved model accuracy through systematic quality validation

Graduate Engineering Trainee

Tata Electronics Pvt. Ltd. | Jan. 2024 - Sep. 2024 | Bengaluru, KA

- Built centralized monitoring systems and automation tools, reducing manual effort by 30%
- Applied statistical analysis to production data, reducing downtime and defect rates
- Executed root-cause analysis and standardized manufacturing processes
- Developed monitoring dashboards providing visibility into system health and operational metrics

Operations Intern

Kirloskar Electric Company Ltd. | Aug. 2023 - Sep. 2023 | Nelamangala, KA

- Optimized motor assembly workflows, reducing cycle time by 25% and downtime by 10%

Featured Engineering Projects

Engineering Quality & CI/CD Framework

GitHub: github.com/KishanR-dev/engineering-quality-cicd | **Tech:** Python, Pytest, GitHub Actions, Ruff, Bandit, pip-audit

- Designed and implemented comprehensive quality automation framework with **83 tests** achieving **94.62% code coverage**
- Built CI/CD pipeline with automated linting (Ruff), security scanning (Bandit), and dependency auditing (pip-audit) for continuous validation
- Established quality gates ensuring **zero critical issues** (Ruff/Bandit/pip-audit clean) before deployment
- Created reusable testing infrastructure supporting rapid iteration and reliable system transformation workflows

ServicePulse - Production Operations Platform

GitHub: github.com/KishanR-dev/servicepulse | **Tech:** Python, FastAPI, State Machines, RESTful APIs

- Built foundational REST API with robust state machine implementation for incident management workflows
- Engineered performance optimization reducing ID generation time from **10.62s to 5.5206s** through concurrency management
- Transformed success rate from **2/98 (baseline) to 50/0 (failures eliminated)** via async/await patterns
- Implemented API instrumentation, logging infrastructure, and requirements traceability framework supporting system observability

Command Center - Engineering Dashboard

Tech: Python, Gradio, Hugging Face Spaces

- Developed visual Engineering & Operations Command Center providing real-time monitoring of transformation metrics
- Built observability dashboard aggregating quality gates, performance benchmarks, and traceability validation

- Designed executive view of full engineering lifecycle (BUILD -> QUALITY -> TRANSFORM -> TRACE -> OBSERVE)

Education

REVA University

B.Tech in Mechatronics Engineering | Bengaluru, KA

CGPA: 8.4 / 10

Additional Information

- **GitHub Portfolio:** 6 public repositories demonstrating full-stack engineering capability
- **Certifications/Projects:** Resume ranking system (LangChain, Gemini API), Chrome extension for RLHF workflows, embedded systems (ESP32 Bluetooth HID)
